

## Course Aim

The aim of NMS training is to provide the attendees with knowledge of how to operate NMS software to record the additional data requirements for the ENB and production of the associated statutory return. It also includes training in the use of the integrated placements functionality.

## Pre-requisites

Whilst delegates should have an understanding of ENB requirements, it would also be advantageous (but not essential) that attendees have some familiarity with the Agresso Students Curriculum and Enrolment processes.

## Suggested Attendees

This course is intended for those responsible for the management and administration of nursing students.

## Course Content

- Maintenance**  
 This covers the setting up of some basic values specific to the use of the NMS module, including the definition of codes required by the ENB.
- Student Details**  
 Once students have been enrolled using the Agresso Students Enrolments module, the additional forms provided within the NMS module allow for the recording of specific student-related data as required by the ENB.
- Nursing Return**  
 Instruction will be given on using the NMS module to produce the ENB return.
- Course Details**  
 Whilst the main course details are set up in the Agresso Students Curriculum module, this section covers the additional course-related data required by the ENB.
- Placements**  
 The training covers the setting up a of host establishments offering a range of placement opportunities and the matching of students to appropriate placements. The recording of attendance details is also included.

## Course Objectives

The course objectives are that attendees will have the ability to operate the NMS software to record the ENB data requirements and to produce the associated statutory return. Delegates will be also be able to record placement details.

## Methodology

The theoretical aspects of curriculum set-up and student enrolment are discussed, with hands-on training provided by the consultant to reinforce all aspects of the NMS.
